

A CARING TEAM

Our Emergency Department is staffed by a team of healthcare professionals trained in emergency medicine, including certified emergency physicians, and trained emergency nurses and technicians. Our goal is to treat every patient as we would our own family members.

In Case of Emergency
EMERGENCY DEPARTMENT

In an emergency, the thing that matters most is getting the best care as fast as possible. The Emergency Department at Hialeah Hospital is a full-service, acute-care department that offers emergency treatment 24 hours a day/ 7 days a week.

FAST TRACK CARE

In order to provide the fastest care possible, our Emergency Department operates on a Fast Track system. Fast Track classifies each patient according to the nature of their emergency. A Triage Nurse assesses each patient and determines the severity of his or her condition. Patients are seen based on the triage level they received.

The 5 Triage Levels:

Level 1: Resuscitation – Patient would be unconscious or not breathing. The highest level of care includes cardiopulmonary arrest or trauma-related issues.

Level 2: Emergent – Patient needs rapid intervention. Can include chest pain, acute asthma, a recent neurological impairment, or severe pain.

Level 3: Urgent – Condition that can progress if not treated in a timely manner. Conditions can include shortness of breath or respiratory problems.

Level 4: Semi-Urgent – Patient has a chronic condition such as chronic gastro/intestinal problems.

Level 5: Non-Urgent – Patient has a mild injury or complaint of an illness such as a cough. These patients are treated and are asked to refer to their personal physician or community health center for follow-up.

SPECIAL CONSIDERATION

Pregnant mothers can find the care they need at Hialeah Hospital if an emergency arises. We provide bedside monitoring and a certified obstetrician is on-site to consult for women who are 32 weeks or more along.

OTHER SERVICES

Our Emergency Department features the latest diagnostic equipment and resources including:

- Hazmat equipment and staff training for patients who require treatment for exposure to chemicals and other hazardous materials.
- We have six specialized rooms for patients who require some form of isolation due to certain disease processes.
- High-tech GE Light Speed 16 Slice CT Scanner. Centralized X-ray department, with portable X-ray machine.
- We have a Picture Archiving and Communication System (PACS) so the Emergency Room Physician can review all digitized films from his or her desk. This process cuts down on wait times for X-ray results.
